

Assignment 1 extra

Hadeer Ghoneim

Verification Diploma

1.verify functionality of mode when the USE_EN = 1

1.Design

```
1  module dff(clk, rst, d, q, en);
2  parameter USE_EN = 1;
3  input clk, rst, d, en;
4  output reg q;
5
6  always @(posedge clk) begin
7      if (rst)
8          q <= 0;
9      else
10         if(USE_EN)
11             if (en)
12                 q <= d;
13             else
14                 q <= d;
15     end
16
17 endmodule
18
```

2. Testbench

```
1  module dff_t1_tb();
2
3      reg  d_tb;
4      logic q_tb, q_expected;
5      reg en;
6      bit clk;
7      bit rst;
8      int error_count;
9      int correct_count;
10
11      dff #(.USE_EN(1)) DUT_DFF_1 (clk, rst, d_tb, q_tb, en);
12
13      dff_GM #(.USE_EN(1)) DUT_DFF_GM_1 (clk, rst, d_tb, q_expected, en);
14
15
16      always begin
17          #5 clk = ~clk;
18      end
19
20      //COUNTER_1
21      task asser_reset ();
22      @(negedge clk);
23          d_tb = 0 ;
24          rst =1;
25          check_fun(0);
26          rst =0;
27      endtask
28
```

```

28
29 //COUNTER_2
30 integer i;
31 initial begin
32     clk = 0;
33     error_count = 0;
34     correct_count = 0;
35
36     asser_reset();
37
38     for(i=0; i<99; i=i+1)begin
39         d_tb = $random;
40         en = $random;
41         check_fun(q_expected);
42     end
43
44     $stop;
45
46 end
47
48 task check_fun(input q_expected);
49 @(negedge clk);
50     if(q_tb != q_expected)
51         error_count = error_count + 1;
52     else
53         correct_count = correct_count + 1;
54 endtask
55
56 endmodule

```

3. Do file

```
1  vlib work
2  vlog dff.v dff_t1_tb.svh +cover -covercells
3  vsim -voptargs=+acc work.dff_t1_tb -cover
4  add wave *
5  coverage save dff_t1_tb.ucdb -onexit -du work.dff
6  run -all|
```

4. Coverage report text file

Coverage Report by instance with details

```

5. QuestaSim waveform snippets

1.verify functionality of mode when the USE_EN = 0

1.Design

I am confused of these two cases when use_en not equal 1 it does not mean that it is 0 !!!

```
1  module dff(clk, rst, d, q, en);
2  parameter USE_EN = 0;
3  input clk, rst, d, en;
4  output reg q;
5
6  always @(posedge clk) begin
7      if (rst)
8          q <= 0;
9      else
10         if(USE_EN)
11             q <= d;
12         else
13             if (en)
14                 q <= d;
15     end
16
17 endmodule
18
19
```

```
1  module dff(clk, rst, d, q, en);
2  parameter USE_EN = 1;
3  input clk, rst, d, en;
4  output reg q;
5
6  always @(posedge clk) begin
7      if (rst)
8          q <= 0;
9      else
10         if (~USE_EN)
11             q <= d;
12         else
13             if (en)
14                 q <= d;
15     end
16
17 endmodule
18
```

2. Testbench

```
1  module dff_t2_tb();
2
3      reg  d_tb;
4      logic q_tb, q_expected;
5      reg en;
6      bit clk;
7      bit rst;
8      int error_count;
9      int correct_count;
10
11      dff #(.USE_EN(0)) DUT_DFF_2 (clk, rst, d_tb, q_tb, en);
12
13      dff_GM #(.USE_EN(0)) DUT_DFF_GM_2 (clk, rst, d_tb, q_expected, en);
14
15
16      always begin
17          #5 clk = ~clk;
18      end
19
20      //COUNTER_1
21      task asser_reset ();
22      @(negedge clk);
23          d_tb = 0 ;
24          rst =1;
25          check_fun(0);
26          rst =0;
27      endtask
28
```

```

28
29 //COUNTER_2
30 integer i;
31 initial begin
32     clk = 0;
33     error_count = 0;
34     correct_count = 0;
35
36     asser_reset();
37
38     for(i=0; i<99; i=i+1)begin
39         d_tb = $random;
40         en = $random;
41         check_fun(q_expected);
42     end
43
44     $stop;
45
46 end
47
48 task check_fun(input q_expected);
49 @(negedge clk);
50     if(q_tb != q_expected)
